

We serve clients all across the country with a focus on the Midwest states of Nebraska, Iowa, South Dakota, Colorado, Kansas, and Missouri.

Environmental Air Technology can help to achieve the necessary level of air quality for almost any indoor environment ...and you'll find when working with our experienced team, we get it right the **first time**.

## Experience = Expertise

Over the past three decades in business, we have been given the opportunity to serve clients in nearly every industry - from commercial buildings to major manufacturing facilities to school districts. This experience gives us the ability to offer practical solutions to deliver products that are designed specifically for your business and your clean air needs.

# Ventilation & Air Filtration Solutions for Cleaner, Healthier Facilities

Environmental Air Technology is a second-generation, family-owned business providing industrial and commercial air pollution control equipment and ventilation systems. Our services include facility assessment, sales, custom-designed systems, installation, and ongoing support.

Since we started, our primary goal has been to resolve air quality problems efficiently and economically by offering you world-class engineered products to keep the environment clean and your people safe.

## We Take Compliance Seriously

In addition to being recognized for our commitment to outstanding customer service, our team brings you assurance that your systems meet or exceed regulatory compliance standards, including reducing the risk of fires and explosions due to combustible dust, etc.

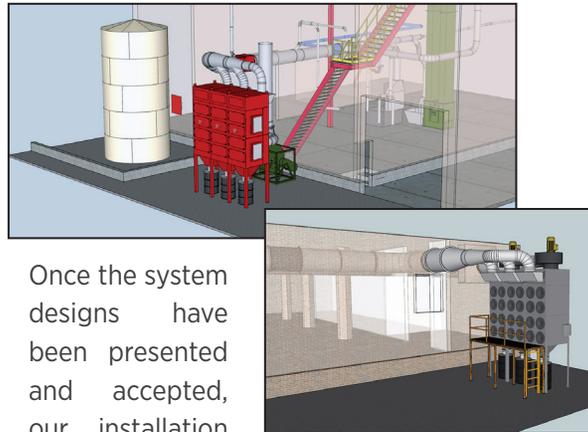

## In-House Design & Engineering

When it comes to indoor air quality, every facility is different. And while most of our products are designed to satisfy most buildings, we also have the experience and ability to tackle any unique situation that demands a custom-designed system.

First, we evaluate your facility's space and use, then work with your team to design and present a practical solution that will be on-time and on-budget.

Next you'll receive easy-to-understand, detailed CAD designs of how the product will fit and function within your facility.

Once the system designs have been presented and accepted, our installation specialists deliver and install on-site and conduct testing, followed by operator and maintenance training.

## PRODUCTS

**DUST COLLECTION SYSTEMS**

**AIR CLEANING SYSTEMS**

**AIR CURTAINS**

**DOWNDRAFT TABLES**

**SNAP-TOGETHER DUCTWORK**

**INDUSTRIAL VACUUM SYSTEMS**

## APPLICATIONS

Weld Smoke  
Laser/Plasma  
Grinding/Buffering  
Abrasive Blasting  
Combustible Dust

Wood Dust  
Powder Coating  
Coolant Mist  
Odor/Fumes  
...and more!
